Claim Rejections - 35 USC § 112

1. Claims 19 and 20 provide for the use of chiral compound, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claims 19 and 20 are rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd.* v. *Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

- 2. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 3. Claims 1-20 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the species disclosed and taught in the specification, does not reasonably provide enablement for other species not taught in the specification. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these

Art Unit: 1756

claims. The claims are broader than the enabling disclosure. The claimed invention is not supported by examples commensurate in scope. There are no teachings how to made the rings containing oxygens and nitrogen-oxygen, nitrogens, sulfur(s), sulfonyl and carbonyl groups. There is only methylene and oxygen groups are exemplified in the specification. The claimed compound and composition thereof represented by the present structure has enormous permutations. There are no general guidelines to show how one of the ordinary skills in the art can synthesize the compound represented by the present structure except the compounds in Schemes 1-3 exemplified in the specification. LC is an unpredictable art. Without knowledge of the properties of species commensurate in scope with the claims, Applicants invite the skilled artisan to first synthesize and then test the species before a use can be undue. All govern the properties of the LC and mixture thereof, which further determine the utility in one of a multitude of functionally distinct compositions and displays for optical applications. Applicants claim offer little more than an invitation to experiment or even presupposing the species call can be readily made.

Claim Rejections - 35 USC § 102

- 4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
 - A person shall be entitled to a patent unless –
 - (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Birman et al. (Tetrahedron: Asymmetry Vol. 10, pages 125-131, 1999).

Application/Control Number: 10/651,692 Page 4

Art Unit: 1756

The reference discloses that chiral 1,1-spirobiindane derivatives represented by formulae 4, 6-7, rac-16 and 20a-20b anticipate the claimed invention.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shean C. Wu whose telephone number is 571-272-1393. The examiner can normally be reached on 9:30 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Huff can be reached on 571-272-1385. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
